

Benefits of Bone Broth

Bone broth has lots of fantastic benefits as an extra in our dog's diet. Here are some of the benefits listed below:

- Supports digestive health
- Soothes upset stomach
- Supports joint health
- Provides hydration & nutrients during illness
- Boosts the immune system
- Can help reduce allergy symptoms
- Helps to detox the liver
- Can help tempt fussy eaters

Bone broth feeding suggestions are usually 50-150mls daily. However, should your dog be unwell with a stomach bug you can of course give some extra broth to help aid recovery.

Several options are available but it is critical you do not use supermarket broth as this often uses onion which is toxic to dogs.
